SUBJECT INDEX TO VOLUME 19

A

Acetic acid, phase equilibria in systems with water and Laureth 4, 399–420
Acid-base interactions
in the cornea-tear film system, 1031–1068
effect on the hydrophobicity and hydrophilicity, 1163–1173
Acrylic polymers, hydrophobically modified, aqueous two-phase systems from, 805–820
Aerosol chemical reactions, Raman studies of, 293–309
Alcohols, ethoxylation in falling film reactor, 423–433
Alkalinization, homogeneous, for synthesis of metal oxide particles from aqueous media, 207–228
N-Alkoxy-hydroxypropyl-N, N-dimethyl-glycine betaine surfactants, preparation, surface activity, and biodegradability of, 63–76
Alkylbetaine, modification by hydroxypropyl group, 63–76
Alumina/water interface, effect of the incorporation of hydrophobic, hydrophilic, and ionic groups through lysine modification of beta-lactoglobulin on its adsorption at, 435–449
Amino groups, on the surface of polystyrene particles, 785–804
Aqueous two-phase systems, from cyclodextrin polymers and hydrophobically modified acrylic polymers, 805–820

B

Bacillus cereus and *Bacillus subtilis*, influence of growth temperature on the surface properties and adhesion to polyurethane, 1175–1197
Biominerals, surface, interfacial, and electrokinetic properties of, 723–738
Butyl acrylate, effect of highly carboxylated seed lattices on semi-batch surfactant-free emulsion polymerization of, 1–18

C

Calcium phosphates, induction of flocculation of aqueous suspensions of titania by surface nucleation of, 761–774
Carbopol hydrogels, easy to disperse, rheological characterization of, 31–42

Catalysts, monodisperse, the effect of the reversed micellar systems on, 77–91, 493–510, 511–520
Cations
  high-resolution gas adsorption study of illites permuted with, 739–759
  hydrophobizing effect on acidic phospholipid membranes, 951–962
Cell biology, specific and nonspecific interactions in, 963–978
Ceramics and related fields, preparation and applications of coated powders in, 249–265
Chloral hydrate, ^{29}Si NMR investigation of reaction with tetraethyoxysilane in ethanol, 571–590
Clay complexes with surfactants, comparison of the influence of a cationic and nonionic surfactant on the adsorption of hydrophobic pollutants on, 379–398
Coalescence, reduction in emulsions subsequent to fragmentation of primary flocs, 311–327
Coated powders, preparation and applications in ceramics and related fields, 249–265
Cobalt boride particles, hydrogen activity in the CTAB/1-hexanol/water reversed micellar system, 511–520
Colloid and surface chemistry, principles of (book review), 139
Colloidal dispersions, aqueous, stabilizing effect of monoamino-monocarboxylic acids for, 475–491
Colloidal drug delivery systems (book review), 139–140
Colloidal particles, for efficient scavenging of fatty acid Langmuir–Blodgett films, 875–883
Colloidal pigments, uniform, generation by precipitation of anionic water-soluble dyes with metal salts, 903–913
Complexation surface reaction constants, determination in the metal oxide/electrolyte system, 267–291
Contact angle, effect of the adsorption onto a solid surface of vapor molecules originating from the liquid drop on, 1221–1236
Copolymers, the effect of surface hydrogen bonding on the hydrophobicity and hydrophilicity of, 1163–1173
Cornea-tear film system, acid-base interactions in, 1031–1068
Crude oils
  and heavy crude oil fractions, complex permittivity of, 93–126
  and water interface, buildup of interfacial film at, 465–473
Cutting-oil water emulsions, influence of inorganic salts on the zeta potentials of, 661–678
Cyclodextrin polymers, aqueous two-phase systems from, 805–820

D

Dairy industry, the role of surface forces in the fouling of stainless steel in, 1127–1150

Dimethylformamide, the effect of mixed micelles of surfactants on the alkaline hydrolysis of, 591–598
Dissolution, of fatty acid salts in water, thermodynamic properties of, 369–378
Dolomite, equilibrium modeling of pseudomonad aggregation and partitioning to, 1081–1106
Drug-loaded polymer matrices, wettability of, 821–841
Dyes, anionic water soluble, controlled precipitation with metal salts for uniform colloidal pigments, 903–913

E

Easy-to-disperse carbopol hydrogels, rheological characterization of, 31–42
Electrophoresis, interval carrier free, for high-resolution protein purification, 937–950
Electrophoretic devices, standardization by microparticles, 915–936
Emulsification, effect of interaction between surfactants, HLB, and zeta potential in, 43–61
Emulsion polymerization, semibatch surfactant free, of butyl acrylate, effect of highly carboxylated seed lattices on, 1–18
Emulsions
  cutting-oil water, influence of inorganic salts on the zeta potentials of, 661–678
  fragmentation of primary flocs and subsequent reduction of coalescence in, 311–327
  methyl linoleate, effect of polysaccharides on oxidative stability of, 679–694
  structures involving sodium hyaluronate during evaporation of, 885–902
  water-in-crude oil, role of the state of solvation of asphaltenes and of waxes in the stability of, 339–367
Engulfment, and surface tension and stickiness, 1151–1162
Equilibrium modeling, of pseudomonad aggregation and partitioning to dolomite, 1081–1106
Ethoxylation, of alcohols in falling film reactor, 423–433
Evaporation, of emulsion formulations, structures involving sodium hyaluronate during, 885–902

F

Falling film reactor, ethoxylation of alcohols in, 423–433
Fatty acid Langmuir–Blodgett films, scavenging by colloidal particles, 875–883
Fatty acid salts, thermodynamic properties of dissolution in water, 369–378
Fermentation, water in oil, model simulation for xanthan, 1003–1029
Films
  fatty acid Langmuir–Blodgett, scavenging by colloidal particles, 875–883
  interfacial, buildup at the crude oil/water interface, 465–473
  systems, cornea-tear, acid-base interactions in, 1031–1068

Flocculation, of aqueous suspensions of titania induced by surface nucleation of calcium phosphates, 761–774
Flocs, primary, fragmentation in emulsions and the subsequent reduction of coalescence, 311–327
Food colloids (book review), 545–546
Food emulsions (book review), 546
Forced hydrolysis, of indium hydroxide, 229–247
Froth flotation, selective wetting of polymers by surfactant adsorption during, 859–873

G

Gas adsorption, high resolution, for study of illites permuted with various cations, 739–759
Gelatin, function in controlled precipitation processes of nanosize particles, 163–184
Gel-sol process, formation mechanism of uniform spindle-type titania particles in, 143–161
Glycolic acid, phase equilibria in the systems with water and Laureth 4, 399–420
Grafting, covalent, of tryptophan to solid surfaces for inhibition of protein adsorption, 451–464
Growth temperature, influence on the surface properties and adhesion of *Bacillus cereus* and *Bacillus subtilis* to polyurethane, 1175–1197

H

HLB. *See* Hydrophil lipophile balance
Homogeneous alkalinization, for synthesis of metal oxide particles from aqueous media, 207–228
Hyaluronic acid polar interactions, 979–1001
Hydrogels, easy-to-disperse carbopol, rheological characterization of, 31–42
Hydrogen bonding, surface, effect on hydrophobicity and hydrophilicity of copolymers, 1163–1173
Hydrolysis
  alkaline, of dimethylformamide, the effect of mixed micelles of surfactants on, 591–598
  forced, of indium hydroxide, 229–247
Hydropathic complementarity, for the description of immunochemical specificity, 1199–1219
Hydrophil lipophile balance (HLB), effect of interaction with surfactants and zeta potential in emulsification, 43–61
Hydrophobic bonding, phenomenological thermodynamics of, 329–338
Hydrophobic pollutants, influence of a cationic and a nonionic surfactant on the adsorption on surfactant/clay complexes, 379–398
Hydrophobic transposon mutant Tn-5 of *Rhizobium etli*, surface properties of, 1069–1080
Hydrophobicity and hydrophilicity of copolymers, effect of surface hydrogen bonding on, 1163–1173

Hydrophobizing effect, of cations on acidic phospholipid membranes, 951–962
Hydrotrope solutions, preparation of vesicles from, 19–30
α-Hydroxy group, effect on the phase behavior in the systems of acetic and glycolic acid with water and Laureth 4, 399–420
Hydroxypropyl group, modification of alkylbetaine by incorporation of, 63–76

I

Illites, permuted with cations, high-resolution gas adsorption study of, 739–759
Immunochemical specificity, mimotopes, continuous paratopes, and hydropathic complementarity as novel approximations in the description of, 1199–1219
Indium hydroxide, forced hydrolysis of, 229–247
Inorganic salts, influence on the zeta potentials of cutting-oil water emulsions, 661–678
Inorganic small particles, formation by photochemical reaction in lyotropoic liquid crystals, 127–138
Interfacial film, buildup at the crude oil/water interface, 465–473
Interval carrier free electrophoresis, for high-resolution protein purification, 937–950
Inverse-emulsion stability, quantification with an artificial neural network, 551–569
Ionization surface reaction constants, determination in the metal oxide/electrolyte system, 267–291

L

β-Lactoglobulin adsorption at alumina/water interface, effect of incorporation of hydrophobic, hydrophilic, and ionic groups through lysine modification of, 435–449
Langmuir–Blodgett films, fatty acid, scavenging by colloidal particles, 875–883
Lyotropic liquid crystals, photochemical reaction for formation of inorganic small particles in, 127–138
Lysine modification, of beta-lactoglobulin, effect of incorporation of hydrophobic, hydrophilic, and ionic groups on, 435–449

M

Mass transfer, of nonionic surfactant between toluene and water, 535–543
Membranes, acidic phospholipid, hydrophobizing effect of cations on, 915–962
Metal oxide particles, the homogeneous alkalinization method for synthesis from aqueous media, 207–228
Metal oxide/electrolyte system, determination of the ionization and complexation surface reaction constants in, 267–291

Methyl linoleate in emulsion, effect of polysaccharides on oxidative stability of, 679–694
Mica, surface thermodynamic properties of, 775–783
Microemulsions
  with anionic surfactant, oleic acid/glycol as an alternative to pentanol in, 521–533
  sensitized reaction in spectroscopic analysis, 637–660
Microparticles, for standardization of electrophoretic devices and process control, 915–936
Mimotopes, for the description of immunochemical specificity, 1199–1219
Mixed micelles of surfactants, effect on the alkaline hydrolysis of dimethylformamide, 591–598
Monoamino-monocarboxylic acids stabilizing effect for aqueous colloidal dispersions, 475–491

N

Nanosize particles
  the function of gelatin in controlled precipitation processes of, 163–184
  silver metal, control of particle size, self-assemblies in 2D and 3D superlattices, and optical properties of, 185–206
Neural network, artificial, for quantification of inverse-emulsion stability, 551–569
NMR. *See* Nuclear magnetic resonance
Nuclear magnetic resonance (NMR), ^{29}Si, for investigation of the reaction between tetraethyoxysilane and chloral hydrate in ethanol, 571–590

O

Oleic acid/glycol, as an alternative to pentanol in microemulsions with anionic surfactant, 521–533
Oxyanions, sorption by surfactant-modified zeolite, 843–857

P

Paratopes, continuous, for the description of immunochemical specificity, 1199–1219
Pentanol, in microemulsions with anionic surfactant, oleic acid/glycol as an alternative to, 521–533
Permittivity, complex, of crude oils and solutions of heavy crude oil fractions, 93–126
Phase equilibria, in the systems of acetic and glycolic acid with water and Laureth 4, 399–420
Phospholipid membranes, acidic, hydrophobizing effect of cations on, 951–962
Photochemical reaction, for formation of inorganic small particles in lyotropic liquid crystals, 127–138
Polar interactions, of hyaluronic acid, 979–1001

Pollutants, hydrophobic, influence of a cationic and a nonionic surfactant on adsorption on surfactant/clay complexes, 379–398
Poly(ethylene oxide)-coated surfaces interactions, and interactions with proteins, 1107–1126
Polymers
  cyclodextrin and hydrophobically modified acrylic, aqueous two-phase systems from, 805–820
  matrices, drug loaded, wettability of, 821–841
  selective wetting by surfactant adsorption during froth flotation, 859–873
Polysaccharides, effect on oxidative stability of methyl linoleate in emulsion, 679–694
Polystyrene particles, with surface amino groups, 785–804
Polyurethane, influence of growth temperature on surface properties and adhesion of *Bacillus cereus* and *Bacillus subtilis* to, 1175–1197
Powders, coated, preparation and applications in ceramics and related fields, 249–265
Precipitation, controlled
  of anionic water-soluble dyes with metal salts for generation of uniform colloidal pigments, 903–913
  of nanosize particles, the function of gelatin in, 163–184
Process control, standardization by microparticles, 915–936
Protein
  adsorption, inhibition by covalent grafting of tryptophan to solid surfaces, 451–464
  interactions with poly(ethylene oxide)-coated surfaces, 1107–1126
  purification, high resolution, interval carrier free electrophoresis for, 937–950
Pseudomonad, equilibrium modeling of aggregation and partitioning to dolomite, 1081–1106

R

Raman studies, of aerosol chemical reactions, 293–309
Reversed micellar systems
  effect on the catalytic activity of monodisperse catalysts, 77–91, 493–510, 511–520
  mixed, of AOT/nonionic surfactants/n-heptane, solubilization in, 599–611
Rhizobium etli, surface properties of a hydrophobic transposon (Tn-5) mutant of, 1069–1080

S

Seed lattices, highly carboxylated, effect on semibatch surfactant-free emulsion polymerization of butyl acrylate, 1–18
Silicate minerals, layer, surface thermodynamic properties of, 775–783
Silver metal nanosize particles, control of particle size, self-assemblies in 2D and 3D superlattices, and optical properties of, 185–206
Sodium hyaluronate emulsions, structural changes during evaporation of, 885–902

Sol/gel glass, with ferric nitrate hydrate temperature dependence transition, 613–636
Solubility and related properties (book review), 695
Solubilization, in mixed reverse micellar systems of AOT/nonionic surfactants/n-heptane, 599–611
Sorption, of oxyanions by surfactant-modified zeolite, 843–857
Spectroscopic analysis, the sensitized reaction of microemulsion in, 637–660
Stability
  of aqueous colloidal dispersions, effect of monoamino-monocarboxylic acids on, 475–491
  of inverse-emulsion, quantification with an artificial neural network, 551–569
  oxidative, of methyl linoleate in emulsion, effect of polysaccharides on, 679–694
  of water-in-crude oil emulsions, role of the state of solvation of asphaltenes and of waxes in, 339–367
Stainless steel in the dairy industry, the role of surface forces in the fouling of, 1127–1150
Stickiness, and surface tension and engulfment, 1151–1162
Styrene
  hydrogenation, reaction model in CTAB/1-hexanol (1-pentanol or 1-butanol)/water reversed micellar solution, 493–510
  liquid-phase hydrogenation over the nickel boride catalyst prepared in the CTAB/1-hexanol/water reversed micellar systems, 77–91
Surface energetic properties, of illites permuted with various cations, 739–759
Surface forces, role in fouling of stainless steel in the dairy industry, 1127–1150
Surface nucleation, of calcium phosphates, for induction of flocculation of aqueous suspensions of titania, 761–774
Surface reaction constants, ionization and complexation, determination in the metal oxide/electrolyte system, 267–291
Surface tension, and stickiness and engulfment, 1151–1162
Surfactants
  adsorption during froth flotation, selective wetting of polymers by, 859–873
  N-alkoxy-hydroxypropyl-N, N-dimethyl-glycine betaine, preparation, surface activity, and biodegradability of, 63–76
  anionic, oleic acid/glycol as an alternative to pentanol in microemulsions with, 521–533
  cationic and nonionic, comparison of influence on the adsorption of hydrophobic pollutants on surfactant/clay complexes, 379–398
  effect of interaction with HLB and zeta potential in emulsification, 43–61
  mixed micelles, effect on the alkaline hydrolysis of dimethylformamide, 591–598
  nonionic, transfer between toluene and water, 535–543
  sorption of oxyanions by zeolite modified by, 843–857
  specialist (book review), 546–547

T

Tetraethyoxysilane, ^{29}Si NMR investigation of reaction with chloral hydrate in ethanol, 571–590
Thermal analysis, of sol/gel glass, 613–636
Thermodynamics
of the dissolution of fatty acid salts in water, 369–378
phenomenological, of hydrophobic bonding, 329–338
of the surface of micas and related layer silicate minerals, 775–783
Titania
aqueous suspensions, flocculation induced by surface nucleation of calcium phosphates, 761–774
particles, uniform spindle type, formation mechanisms in the gel-sol process, 143–161
Tryptophan, covalent grafting to solid surface for inhibition of protein adsorption, 451–464

V

Vapor molecules, originating from the liquid drop, degree of effect on the contact angle by the adsorption onto a solid surface, 1225–1240
Vesicles, preparation from hydrotrope solutions, 19–30

W

Water-in-crude oil emulsions, role of the state of solvation of asphaltenes and of waxes in the stability of, 339–367
Water-in-oil xanthan fermentation, model simulation of, 1003–1029
Wettability, of drug-loaded polymer matrices, 821–841
Wetting, selective, of polymers by surfactant adsorption during froth flotation, 859–873

X

Xanthan fermentation, water in oil, model simulation of, 1003–1029

Z

Zeolite, surfactant modified, sorption of oxyanions by, 843–857
Zeta potential
of cutting-oil water emulsions, influence of inorganic salts on, 661–678
effect of interaction with surfactants and HLB in emulsification, 43–61
